PERSONAL INFO

- 👤 Male
- 🎓 Hanoi Univ. of Civil Engineering
Information Technology – 2021–2025
- 🏢 Tan Dan JSC – Jan 2024–Present

TECHNICAL SKILLS

AI Agentic & LangGraph

StateGraph, Sub-graph, HITL, Send API, PostgresSaver, Multi-Agent Orchestration

LLM & RAG

Prompt Engineering, Embedding, Semantic Vector Search, Re-ranking, Gemini API, Ollama

Backend & API

Python · FastAPI · Async/Await · BackgroundTasks · Dependency Injection · RESTful

C# / .NET

.NET Framework & Core, RESTful API, enterprise system maintenance

Databases

PostgreSQL (JSONB, UUID), SQL Server, Redis

Frontend

ReactJS – Responsive UI, component-based architecture

DevOps & Tools

Docker · Docker Compose · Git (GitHub/GitLab) · Ngrok · Linux/Ubuntu

INTERESTS

- 📖 Reading
- 💪 Gym
- 🎮 Gaming

CERTIFICATIONS

- 📜 TOEIC 550 (2023)

CAREER OBJECTIVE

Overall Goal

Leverage a strong foundation in software development and system architecture to specialize in AI Engineering. Aiming to become an expert in designing and deploying Agentic AI systems that automate complex workflows and optimize operational performance at enterprise scale.

Short-term

Rapidly adopt company engineering processes and apply LangChain, LangGraph, LlamaIndex, or CrewAI to build and optimize Multi-Agent Workflow systems. Deliver high-impact Agentic AI projects in real-world scenarios such as intelligent data analysis automation, digital content production, and smart process handling.

Long-term

Grow into an AI Architect / Tech Lead role. Lead the design of complex AI Agent architectures capable of reasoning, planning, and large-scale tool-calling at the Enterprise level. Contribute to building core AI technology and mentor the next generation of AI engineers.

EDUCATION

Hanoi University of Civil Engineering
Information Technology

2021 – 2025

PROFESSIONAL EXPERIENCE

Tan Dan Informatics Joint Stock Company
Software Engineer

Jan 2024 – Present

- ▶ Engineered and maintained high-availability **RESTful APIs** and core system features using **C#/.NET**, ensuring continuous uptime and production stability.
- ▶ Optimized database performance by restructuring complex table schemas and **SQL Server** queries, enabling efficient processing of large-scale datasets and reducing query latency.
- ▶ Delivered a fully responsive **ReactJS** web interface, boosting user interaction speed by **20%** and achieving cross-device compatibility across the entire platform.

SELECTED PROJECTS

Career Agent – AI-Powered Job Search System
Software Engineer

May 2026

Stack: FastAPI · LangGraph · PostgreSQL · Gemini API · Tavily Search | github.com/ha1tuan/career_agent

- ▶ Architected an **end-to-end AI Agentic system** that automatically matches job listings to candidate CVs using a **LangGraph multi-node pipeline** with Human-in-the-Loop (HITL) review.
- ▶ Engineered an **Interview Simulation module** as a LangGraph sub-graph, dynamically generating context-aware interview questions based on prior answers and delivering automated post-session evaluations.

- ▶ Implemented **PostgresSaver checkpointing** with event-driven architecture, enabling fully persistent session state that survives server restarts and network disconnections.

AI Fanpage Content Automation System

May 2026

Software Engineer

Stack: FastAPI · LangGraph (6-Agent) · Exa API · Kling AI · MoviePy · Docker · Telegram Bot | github.com/ha1tuan/fanpage-agent

- ▶ Designed and deployed a **6-agent LangGraph pipeline** that fully automates Facebook Fanpage content production – topic research, Gen-Z script writing, 45-second AI video generation (3 scenes), and auto-publishing – all triggered by a **single Telegram command**.
- ▶ Integrated **Kling AI Video Generation API** (JWT auth), edge-tts voiceover, and MoviePy video composition via an asynchronous background task queue.
- ▶ Reduced fanpage content operation time from **several hours to under 1 minute** of human interaction ("One-tap" workflow), eliminating all manual production steps entirely.
- ▶ Live fanpage: fb.com/lonroidungluoi
